

Al's notes on Prescott Lumber

The kit is Walther's Cornerstone (HO) "Walton Lumber Yard"

I painted it with rattle can gray primer, hand lettered the signs with dry transfer lettering, weathered the siding with Pan Pastels, and the interior detailing includes a variety of things, including some blocks of wood color-coded on the ends to denote dimensional lumber. The base around the tracks was "paved" with lightweight hydrocal, painted and weathered to simulate concrete. The interior is illuminated with two "warm white" LED's.
